

Lifellink (Ethernet to Serial)  
Wired

## Take Control with Lifellink®

Lifellink® is the world's first conversion module that allows you to turn home systems into Web Services-enabled devices, making the devices easily discovered and controlled by Life|ware® home control software.

It's the smart, easy way to convert systems, like security alarms, and devices, like lights and dimmers, into components you can control over a network.

Lifellink also makes installation and setup simpler by dynamically discovering and configuring existing Web Services-enabled devices.

Available as an external plug-in, an embedded package, or as software that can be integrated into a supported vendor's home control hardware, Lifellink lets you get more out of home automation.

### Features

- Available as an external plug-in, embedded package, or software
- Wired and wireless connections available
- Ethernet to Serial or Ethernet to Relay Triggers
- Reduces wiring in the home and frees up connections to your Media Server

### Models

Model	Type	Connection
